

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-5. (Canceled)

6. (Currently Amended) A light absorbent composition, which comprises a styryl dye and said styryl dye substantially absorbs a visible light with a wavelength of around 400 nm ~~when formed in a thin layer, said styryl dye having an absorption maximum at a wavelength of 400 nm or less~~ and being represented by Formula 1:

Formula 1:

wherein in Formula 1, ~~Φ~~Φ<sub>1</sub> represents a heterocycle represented by any one of Formulae 2 to 8; ~~Φ~~Φ<sub>2</sub> represents an ~~optionally substituted~~ aromatic ring which has a substituent selected from the group consisting of halogen, cyans, nitro, and carboxy, or heterocycle having one or more nitrogen atoms; R<sub>1</sub> represents a hydrogen atom, an aliphatic hydrocarbon group, ether group, acyl group, halogen, or cyano group, and the aliphatic hydrocarbon group, ether group, or acyl group may have a substituent; X<sup>-</sup>

represents a counter ion; and "n" is a number of  $X^-$  to balance the electric charge in the styryl dye:

Formula 2:

Formula 3:

Formula 4:

Formula 5:

Formula 6:

Formula 7:

Formula 8:

throughout Formulae 2 to 7, A represents an optionally substituted monocyclic- or polycyclic-aromatic ring or heterocycle; when A is not present in Formulae 2 to 7, one or more substituents similar to those that are bound to A may be in the position where A is located; throughout Formulae 2 to 8, R<sub>2</sub> represents an optionally substituted aliphatic hydrocarbon group and R<sub>3</sub> represents a hydrogen or an optionally substituted

aliphatic hydrocarbon group which is identical to or different from R<sub>2</sub>.

7. (Previously Presented) The light absorbent composition of claim 6, which contains one or more other organic dye compounds sensitive to a visible light.

8. (Previously Presented) The light absorbent composition of claim 6, which further contains one or more appropriate light-resistant improvers.

9. (Canceled)

10. (Currently Amended) An optional recording medium comprising a styryl dye represented by Formula 1 and capable of recording information by using a laser beam with a wavelength of 450 nm or less shorter, said styryl dye ~~having an absorption maximum at a wavelength of 400 nm or less and~~ substantially absorbing a visible light with a wavelength of around 400 nm ~~when formed in a thin layer,:~~

Formula 1:

wherein in Formula 1,  $\Phi_1$  represents a heterocycle represented by any one of Formulae 2 to 8;  $\Phi_2$  represents an ~~optionally~~ substituted aromatic ring which has a substituent selected from

the group consisting of halogen, cyano, nitro, and carboxy, or heterocycle having one or more nitrogen atoms;  $R_1$  represents a hydrogen atom, an aliphatic hydrocarbon group, ether group, acyl group, halogen, or cyano group, and the aliphatic hydrocarbon group, ether group, or acyl group may have a substituent;  $X^-$  represents a counter ion; and "n" is a number of  $X^-$  to balance the electric charge in the styryl dye:

Formula 2:

Formula 3:

Formula 4:

Formula 5:

Formula 6:

Formula 7:

Formula 8:

throughout Formulae 2 to 7, A represents an optionally substituted monocyclic- or polycyclic-aromatic ring or heterocycle; when A is not present in Formulae 2 to 7, one or more substituents similar to those that are bound to A may be in

the position where A is located; throughout Formulae 2 to 8,  $R_2$  represents an optionally substituted aliphatic hydrocarbon group and  $R_3$  represents a hydrogen or an optionally substituted aliphatic hydrocarbon group which is identical to or different from  $R_2$ .

11. (Previously Presented) The optical recording medium of claim 10, which further contains one or more other organic dye compounds sensitive to a visible light.

12. (Previously Presented) The optical recording medium of claim 10, which further contains one or more appropriate light-resistant improvers in a recording layer.

Claims 13-14. (Canceled)

15. (Previously Presented) The light absorbent composition of claim 7, which further contains one or more appropriate light-resistant improvers.

Claims 16-17. (Canceled)

18. (Previously Presented) The optical recording medium of claim 11, which further contains one or more appropriate light-resistant improvers in a recording layer.

Claims 19-20. (Canceled)
